## QuotePilot AI | Venture Summary

### ONE-LINE PITCH

QuotePilot AI converts complex B2B RFQs into technically validated, commercially governed and human-approved quotations—in minutes instead of hours.

### TRACK & BEACHHEAD

Sales Automation AI Agents | Industrial automation suppliers, engineering distributors and SME manufacturers.

#### THE PAIN

- RFQs arrive through email, PDF, Excel and messages. Teams manually interpret specifications, search catalogues, check inventory, calculate price, tax and margin, then chase approvals. Slow or inaccurate responses lose revenue.

#### THE PRODUCT

- A governed workflow: ingest → verify and normalize → clarify gaps → rank products → apply regional commercial rules → approve exceptions → generate PDF and audit trail.

#### WORKING PROTOTYPE

- Interactive six-stage demo with mandatory-field locks, role-based overrides, India/USA/EU scenarios and versioned decision history.

## Startup Snapshot

### PROBLEM

- B2B sales engineers lose time and orders because every technical RFQ must be interpreted, matched and priced manually across disconnected systems.

### INSPIRATION

- Industrial enquiries combine ranges, standards, quantities, delivery constraints and commercial terms. One missing attribute can invalidate the lowest-priced product.

### SOLUTION

- QuotePilot combines document intelligence, governed specification normalization, catalogue retrieval, deterministic commercial rules and human approvals.

### USERS

- Sales engineers, inside sales, application engineers, quotation managers and business owners.

# Problem Understanding

## WHO FEELS THE PAIN MOST

- SME manufacturers and distributors with technical catalogues and lean sales teams.
- Sales/application engineers interpreting specifications before quoting.
- Owners seeking speed without margin leakage or incorrect commitments.

## ROOT CAUSES

- RFQs arrive through email, scanned PDF, Excel and attachments.
- Knowledge is scattered across catalogues, datasheets and experienced staff.
- Price, inventory and lead time sit in separate files or ERP screens.
- Missing mandatory specifications and approvals are handled manually.

## EVIDENCE STATUS

- Working prototype completed; customer validation remains pending. Gate: 15 interviews, 5 RFQ walkthroughs, 3 design partners and 2 paid-pilot commitments.

# Customer & Opportunity

## IDEAL CUSTOMER PROFILE

- B2B supplier with 5–50 sales/application users, 100–10,000 technical SKUs, repeat RFQs, digital catalogues and defined approval policies.  
Beachhead: industrial automation and instrumentation.

## USERS & BUYER

- Users: sales and application engineers. Champion: quotation head. Buyer: owner, Head of Sales or COO. Finance, product and IT govern policies and integrations.

## BEACHHEAD USE CASE

- Email/PDF/Excel RFQs for catalogue products requiring specification validation and human-owned commercial approval.

## OPPORTUNITY MODEL — ASSUMPTION

- Targets: 10 paid accounts Y1, 50 Y2 and 150 Y3. At illustrative ₹30,000/month, 150 accounts equals ₹5.4 crore ARR. Pricing and demand require validation.

# Proposed Solution

## GOVERNED END-TO-END WORKFLOW

1. Ingest RFQ and preserve the original source.
2. Extract and normalize specifications with evidence references.
3. Lock progression when mandatory attributes are missing.
4. Draft clarification or require a justified Technical Approver override.
5. Rank sample products by technical fit, stock and lead time.
6. Apply COGS, discount, margin and India/USA/EU commercial scenarios.
7. Block low-margin offers and require written approval justification.
8. Generate a professional quotation PDF.
9. Record decisions in a versioned audit trail.
10. Keep email, ERP and CRM actions simulated until production integration.

# Technology & AI Approach

## MULTI-AGENT DESIGN

- Intake Agent: classifies documents and extracts structured fields.
- Specification Agent: normalizes units and identifies missing attributes.
- Catalogue Agent: retrieves and ranks products with evidence.
- Commercial Agent: applies cost, discount, margin, tax and payment rules.
- Risk Agent: enforces progression locks and policy thresholds.
- Quote Agent: generates approved documents and audit records.

## CURRENT PROTOTYPE

- Static interactive application with deterministic demo data, printable PDF output and downloadable audit JSON.

## PRODUCTION PATH

- FastAPI, agent orchestration, PostgreSQL/pgvector, rules service, React, role-based access, tenant isolation, encryption and monitored ERP/CRM connectors.

# Competitive Landscape

## CURRENT ALTERNATIVES

- Email + Excel + catalogue search: flexible but slow and person-dependent.
- CPQ: strong after configuration but expects structured inputs.
- CRM/ERP quote modules: systems of record with limited RFQ interpretation.
- Generic document AI: extracts text but may not enforce commercial policy.

## WHY QUOTEPILOT

- Starts with the messy RFQ and preserves source evidence.
- Normalizes technical attributes and locks unresolved mandatory fields.
- Combines AI recommendations with deterministic financial rules.
- Adapts indicative tax, payment and trade terms for India, USA and EU.
- Requires role-based human approval before customer release.

## DEFENSIBILITY

Product ontology, approved corrections, policy mappings, integrations and outcome data improve with every governed workflow.

# Business Model & Go-To-Market

## WHO PAYS

Manufacturer, distributor or system integrator; economic buyer: Head of Sales, COO or owner.

## PRICING HYPOTHESIS

- Paid 6–8 week pilot.
- Starter: ₹15k–₹25k/month; CSV catalogue and limited RFQs.
- Growth: ₹40k–₹75k/month; policies, integrations and analytics.
- Enterprise: annual contract, implementation, private networking and SLA.

## FIRST-CUSTOMER MOTION

### • Founder-led outreach to industrial suppliers.

1. • Diagnose current RFQ time, errors and approval steps.
2. • Run shadow-mode pilots on historical, anonymized RFQs.
3. • Convert against agreed speed, accuracy and governance gates.

### 4. TRACK

Turnaround time, critical-field accuracy, match recall, approvals, gross margin, activation, retention and expansion.

# Development Roadmap

## **COMPLETED | GOVERNED PROTOTYPE**

Six-stage RFQ demo; raw-to-normalized specs; mandatory-field lock; written technical and margin overrides; India/USA/EU commercial scenarios; printable quote and versioned audit trail.

## **NEXT 4 WEEKS | DISCOVERY & DATA**

15 interviews; 5 anonymized RFQs; one product family; evaluation set; 3 design partners.

## **WEEKS 5–8 | FUNCTIONAL MVP**

Real document parsing, catalogue retrieval, configurable policies, user roles and persistent quotation records.

## **WEEKS 9–12 | PILOT HARDENING**

Tenant security, prompt-injection controls, evaluations, monitoring, feedback and first shadow pilot.

## **MONTHS 4–6 | COMMERCIAL BETA**

Email/CRM connector, one ERP integration and target 5–10 paid customers.

# Team

## Amruta Shah

Founder & CEO / AI Engineering & Industry Lead

Amruta Shah brings **11+ years of experience across AI/ML, data science, Generative AI, enterprise delivery, technical sales, and industrial automation.**

She specializes in designing and deploying production-ready AI solutions that connect complex customer requirements with technically and commercially viable outcomes.

### Key Responsibilities

Startup vision and product strategy  
AI/ML and multi-agent system architecture  
Production-ready AI deployment and MLOps  
RFQ, industrial and commercial workflow design  
Customer discovery, partnerships and go-to-market  
AI governance, evaluation and human approval controls

### Core Skills

Python • SQL • ML • Deep Learning • NLP • LLMs • Generative AI • RAG • AI Agents • FastAPI • REST APIs • PostgreSQL • GCP • Cloud Run • AWS • Docker • CI/CD • MLOps • Model Monitoring • Industrial Automation • Technical Sales

## Adarsh Verma

Co-Founder & Product / Technology Lead

Adarsh Verma is pursuing a **Master of Computer Applications (MCA) at the University of Allahabad**. He focuses on building full-stack applications, AI-powered platforms, intelligent automation workflows, and database-driven systems.

### Key Responsibilities

Product vision and system architecture  
AI agent and workflow design  
Frontend development  
Backend APIs and database architecture  
Prototype development and technical documentation

### Core Skills

React • TypeScript • Node.js • Python • AI/ML • AI Agents • APIs • Databases • Cloud Deployment

# Why BITSoM Vertex?

## WHY THIS PROGRAMME

QuotePilot now has a governed prototype. The next challenge is disciplined customer discovery, a narrow beachhead, credible pricing, enterprise design partners and a repeatable sales motion.

## SUPPORT SOUGHT

- Introductions to industrial suppliers, distributors and sales leaders.
- Mentoring on ICP, paid pilots, pricing and procurement cycles.
- Product review on usability, adoption and outcome measurement.
- Architecture, security, legal/IP and responsible-AI guidance.
- Cloud credits and integration/UX support.

## BIGGEST BLOCKER

Representative anonymized RFQs, catalogues, price policies and domain reviewers.

## INCUBATION OUTCOME

3 design partners; 1 validated vertical; measured shadow pilot; 2 paid commitments; evidence-based scale plan.

# Supporting Material

Co-Founder LinkedIn: <https://www.linkedin.com/in/12av21>

## DEMO PROOF

Evidence-grounded normalization • mandatory lock • justified technical override  
Product ranking • margin visibility • India/USA/EU scenarios  
Commercial approval • PDF quote • versioned audit trail
